

Mini Presentation Guidelines

Format

- Presentations will be 5 minutes.
- You should apply something we learned in the last 2-3 lectures to a dataset of your choice.
- Describe the dataset, say what method you are using, show the results on your dataset, and explain what it tells us about the data.
- You'll use the classroom projection system; it'll be easiest to bring a laptop with your slides on it.

Grading

Your presentation will be worth 10% of your overall grade.

The idea is for you to get practice presenting and working with real data, so they will be graded very coarsely:

Points	Criteria
0	Did not present
1	Presented but not a good-faith effort
2	Good-faith effort

I expect everyone who presents to get full marks.
